

Fall 2024 Indigenous Community Engagement Series

A Relational Science Model for Indigenous Land & Data Stewardship

Join Dr. Dominique David-Chavez, TR Heydman, and Griselda Landa-Posas from Colorado State University for the Transformation Network's October Speaker Series presentation!

The presenters will share about their ongoing, student and community-led Indigenous land and data stewardship focused efforts on the Colorado Front Range through a relational science model. This includes research and data governance processes exercising values of integrity, respect, humility, and reciprocity for upholding relational accountability in practice. They will also offer a participatory activity, including a relational model template and discussion time, for our TN community to reflect on their own relational models of practice for convergence science research.

Dr. Dominique David-Chavez
Assistant Professor,
Colorado State University

TR Heydman
PhD Student,
Colorado State University

Griselda Landa-Posas
Master's Student,
Colorado State University

 Wednesday, October 23

 1 - 2 PM MT
